

Mounting Lag Bolts

Mounting Lag bolts with theft prevention decorative threaded heads. Recommend Locktite 271 application after mounting lag bolts.

Lighting Source:

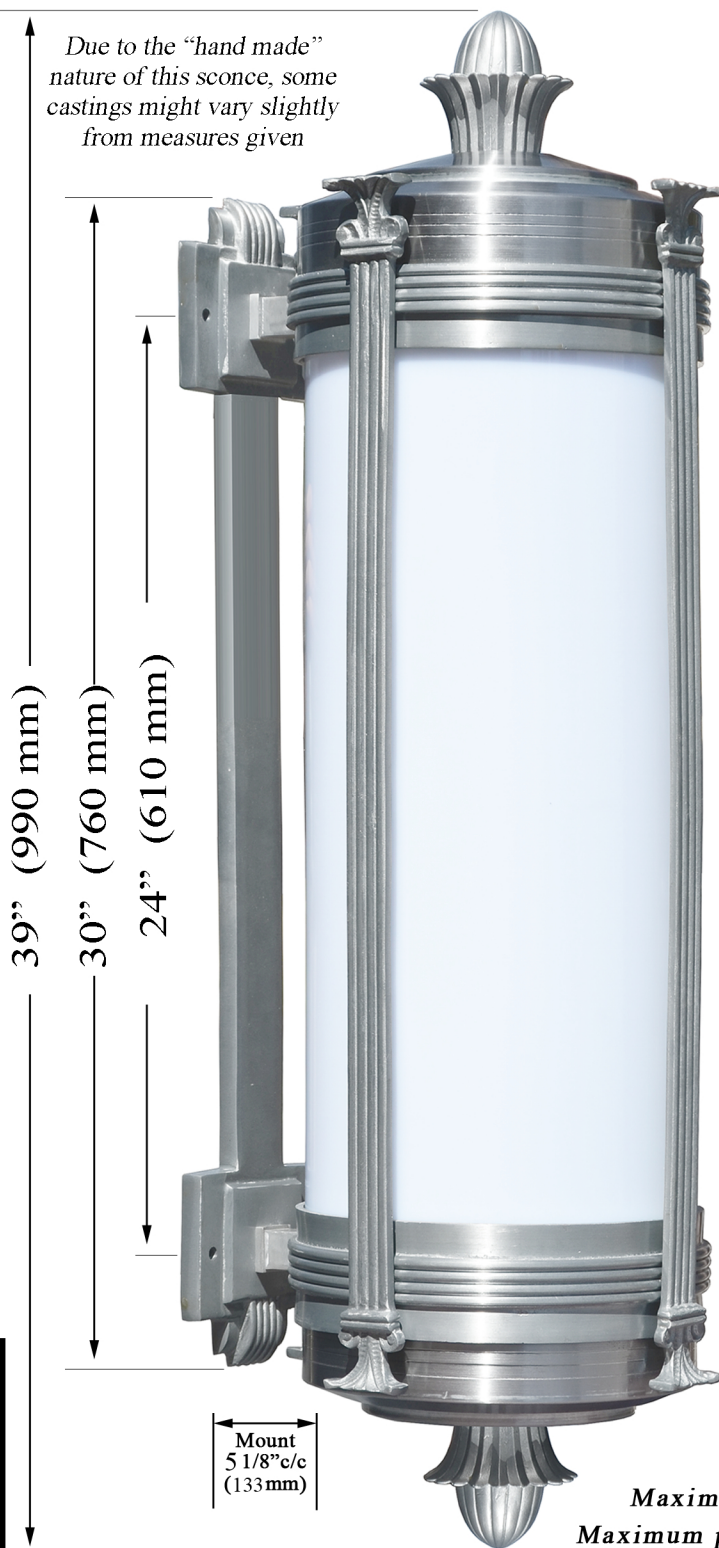

Consists of two SMD energy efficient 24" tubes mounted in standard T-8 holders. Quality SMD tubes are the next step in LED technology. SMD Tubes are easily changed by removing the top finial (and cap). This allows the PMMA lens to slide upwards giving full access to the interior of the light. (see below)

Front Back
SMD 3528 LED Tubes

Comes complete

Due to the "hand made" nature of this sconce, some castings might vary slightly from measures given

39" (990 mm)

30" (760 mm)

24" (610 mm)

Mount 5 1/8" c/c (133mm)

2000 West Sims Way
Port Townsend, WA 98368

Cut Sheet for:

ZB-
BES
IDL

Approved for:
Wet Locations
File #: E137267

PMMA Acrylic Lens:

10" (250mm) diameter
21" "Visible" tall (535 mm)
3mm in thickness
Impact resistant but in worst case scenarios, replacements are available.

Bottom seat, for the lens, has water drains to channel sideways rain away from the interior of the light. Drains are hidden behind the down spars for aesthetic sake.

Maximum Width: 12" (305mm)
Maximum projection: 14 1/2" (370mm)

Art Deco style streamline "Wet" Location sconce is a unique light. Made from Aluminum and zinc materials, it is a co-operation of many separate manufacturing processes. It is supplied with a brushed metal finish of the original metals (pictured). Other finishes are available upon request. We have supplied Verde-Green and a Darkened-Bronze finish

Two SMD LED tubes ARE included in the price of this light. If preferred, we could build it for twin tube fluorescent bulbs or even a series of incandescent or induction single bulb lamps. Or even a cluster of Four SMD tubes for brighter lighting

Mounting: since this sconce weighs 46 lbs (on average), a single electrical box is not going to hold it. Originally mounted with four lag bolts, we kept this application and designed decorative theft deterrant caps. (See top left)
