**Electronic  
Compact  
Fluorescent**

**Conversion  
Compact  
Fluorescent**

The primary difference between these two types of "CF" bulbs is that the **Electronic "CF"** is hard wired into the fixture but the **Conversion** model utilizes a screw-in adapter. Thus making the **Electronic** model more reliable and efficient and the **Conversion** model cheaper and easier. It is important to note that once you screw in the **Conversion** adapter to a standard socket it cannot be removed.

**13 watt Electronic CF**

- Equivalent to a 60 watt incandescent bulb
- 900 lumens
- 12000 average life hours
- Available in four color temperatures

**13 watt Conversion CF**

- Equivalent to a 60 watt incandescent bulb
- 800 lumens
- 10000 average life hours
- Available in one color temperature
